

The following briefly describes the changes incorporated in the associated update. Each subsequent update contains all of the changes incorporated in the previous revisions.

Revision	Date	Description
061.2	June 15, 2022	<p>Various bug fixes and enhancements including the inclusion of:</p> <p>A separate dimensional units value for prompted length values. Helpful when coordinate units are longitude and latitude, or length units are large (miles or kilometres).</p> <p>Resolved (hopefully) occasional error entering and editing regulator and compressor pipe elements.</p> <p>Allow multiple instances of GW to be opened. Helpful when comparing results between models.</p> <p>Added an “Ignore Error Check” option to indicate that nodes, pipes, or customers are to be excluded from the Data Check routine.</p> <p>Added a “Select Supply Node” command to the Customer Data Panel <i>Actions</i> list. Helpful for identifying which node to assign the customer’s load to.</p> <p>And more...</p>
058.2	March 02, 2022	<p>Various bug fixes and enhancements including the inclusion of velocity values in the dxf export options, and the addition of the “Favorites” icon on the GDI screen.</p>
056.2	January 10, 2022	<p>Initial release.</p>
